

### **Wireless / Mobile Computing**

Orient Consultancy specialized in delivering innovative wireless solutions that cut costs, boost productivity, and generate new revenues for clients. Orient Consultancy assists enterprises in extending their legacy or web-enabled applications to the wireless world. Orient Consultancy leverages expertise in the e-business space to provide robust, scalable, secure solutions to our customers.

We extend our expertise to provide customized solutions for the corporate and vertical markets.

- For organizations with existing Internet applications, we can help to quickly redesign and extend those applications to the wireless environment.
- For organizations that are looking for ways to leverage the wireless Web, our full lifecycle services can help identify opportunities and architect and implement solutions.
- For organizations that have already identified their wireless applications, we can deliver the technology, skilled development resources, and project managers necessary to build those applications fast by leveraging its onshore/offshore development model
