

Testing Services

Software applications are backbones of business hence quality becomes one of the key differentiators in success or failure of the software.

Orient Consultancy offers dedicated software testing services to ensure that we,

- Reduce the cost of software testing
- Reduce the overall time to test a software
- Increase the overall productivity and efficiency
- Increase the scalability of resources
- Increase the confidence in delivery by reducing overall risk

Testing Service Model

Our services encompass a full range of turnkey application testing services specifically designed to offer you the testing solutions, professional consulting services. Our testing professionals have the expertise, proven methodologies, and leading-edge solutions to help you assess, plan, and implement your specific testing needs.

Services:

Functional Testing: Functional testing services include the verification of the application and check if all the business requirements of the application are satisfied and tested.

Functional/Regression Test Automation: We develop functional and regression test suites based on a set of robust test cases to ensure high degree of reusability and reliability. Our teams work closely with clients to help them with initial test planning, selection of the right automation tool, its configuration.

Performance Testing: We offer comprehensive load and performance testing services to clients interested in assessing their application performance under a specified load condition before releasing it further.

We have expertise in carrying out performance testing with industry standard tools like Mercury Load Runner to open source testing tools like OpenSTA. We have expertise in offering performance testing services on web applications, client server applications and on platforms ranging from Windows to Linux.

Game Testing: We offer comprehensive game testing services for online and offline gaming applications including PC based Games, console based games and mobiles/devices based games. Our team possesses expertise in testing functionalities, play/logic testing, rule adherence, single/multiplayer testing, compatibility testing, configuration testing and performance testing on gaming applications.

Security Testing: Our security testing services primarily addresses different threats to information security when it comes to mission critical business applications.

We carry out extensive and incremental code reviews to ensure that the coding is done in line with the security standards. We also carry out extensive vulnerability checks (manual and automated) to identify potential information security threats in an application.
